HYBRID-ELECTRIC SYSTEMS FOR YACHTS

FOUNTAINE PAJOT · LAGOON · LEOPARD CATAMARANS · DAY ONE CATAMARANS · DUFOUR · RM

Think hybrid
powered by JOOOL

Inspire a new way of sailing.
One of silence, comfort, and smart energy.

JOOOL engineers integrated energy and propulsion systems that redefine onboard power. **By storing more energy on board, yachts can operate silently at anchor, manoeuvre in electric mode and reduce reliance on generator sets.** The result is quieter operation, improved comfort and more efficient energy use at sea.

Hybrid-electric architectures operate within a unified ecosystem: **scalable, robust and ready for integration**. From intelligent energy management and high-capacity energy storage to electric propulsion, each component is engineered for absolute reliability at sea. Industrialized plug-and-play modules simplify installation, reduce wiring and optimize overall performance.

For nearly three decades, **Alternatives Energies** has refined marine power systems with the same rigor and technical vision. With JOOOL, this expertise sets a new benchmark for modern yacht construction, where advanced technology meets industrial precision.

Silent sailing & mooring

Since 1997 by Alternatives Energies

System integration for

New boats

First-fit integration with partner shipyards. Built into the vessel's production process from the outset.

Refit

Subject to a structural sizing study specific to the vessel : hull characteristics, minimum 40-foot length.

Custom

Bespoke unit engineered to specific constraints : size, use case, or certification requirements.

+119 vessels
worldwide

30 years
of experience

1 million
hours feedback

Silent sailing · Vibration-free · Instant torque

Electric drive

Electric drive eliminates engine noise and vibration from the moment you leave the dock. In harbour, instant torque makes docking precise and predictable, even in tight spaces or strong current. At sea, the PowerPod operates silently, no exhaust, no mechanical noise, no interference with the sailing experience.

Marine proteted areas

Zero exhaust emissions allow access to emissions-restricted zones and eco-sensitive anchorages closed to combustion engines.

Diesel exhaust eliminated

No fumes in the cockpit or saloon. No smell at the helm. Passengers and crew breathe clean air from harbour to anchorage.

Extanded autonomy · Silent anchorage · Home comfort

Energy autonomy

The JOOOL battery bank powers all onboard systems continuously, air conditioning, watermaker, cooking, charging, without generator intervention. Hydrogeneration under sail and solar panels recharge the bank automatically during the passage. At anchor, the system manages distribution autonomously, extending battery life to match the longest stops

No shore power dependency

The battery bank is sized to sustain full onboard comfort without any marina connection. Anchor anywhere, for as long as recharge sources keep pace with consumption.

Scalable capacity

Battery bank sized to cover a full day and night at anchor without any generator start : lighting, fridge, fans, electronics included.

No vibration · Zero noise · Silent anchorage

Silent mooring

The OneBox manages all onboard energy automatically : lighting, refrigeration, ventilation, without starting the generator. Battery capacity covers 24 hours or more of hotel loads at anchor. No engine noise. No vibration. The generator starts only when the battery level requires it, and only for as long as necessary.

All systems on & generator off

As long as the battery covers onboard demand, the generator stays off. You run the boat on stored energy, and silence is never interrupted.

24h+ hotel load autonomy

Battery bank sized to cover a full day and night at anchor without any generator start : lighting, fridge, fans, electronics included.

Solar · Hydrogeneration

Renewable energy

While sailing at 6 to 7 knots, the PowerPod operates in generator mode and recovers approximately 1.5 kWh per hour. On a twin-hull catamaran with two PowerPods, hydrogeneration reaches up to 3 kWh per hour — enough to cover a significant portion of hotel loads during a day's passage. Combined with solar input, renewable sources can sustain onboard autonomy without generator use on most sailing days.

Energy production while sailing

Every nautical mile under sail recharges the battery bank. Passages become self-sustaining energy cycles, the longer you sail, the more you store.

Solar — passive recharge

At anchor or underway, solar panels contribute continuously to the bank. Combined with hydrogeneration, most cruising days require no generator intervention.

ONEBOX

System

Inverter

Converts DC voltage into stable AC service power

Battery Pack LiFePO4

Modular, high-density storage for extended autonomy

Charger

Fast charging from shore

EPMS

Centralized supervision and control of all energy flows

ONE ECOSYSTEM TWO CONFIGURATIONS

Both OneBox architectures share a standardized energy backbone built on industrial-grade components. Each module is engineered for reliability, scalability, and easy shipyard integration.

First step toward electric comfort

ONEBOX Energy

For motor yachts, catamarans, or sailboats equipped with a thermal engine. Centralizes all energy sources, distributes power automatically, and enables massive onboard storage : up to 152 kWh per system to reduce reliance on fossil fuels and optimized onboard comfort.

Full electric sailing experience

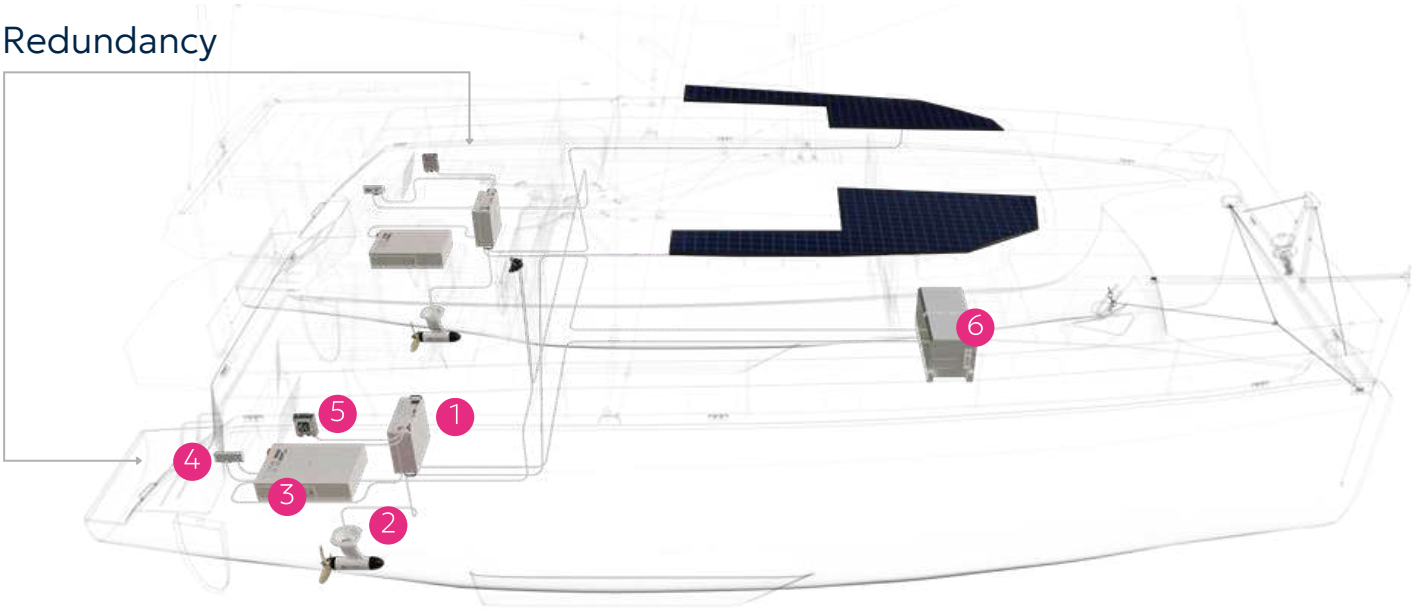
ONEBOX Propulsion

For sailing vessels equipped with JOOOL electric drive. Energy management and massive onboard storage : up to 152 kWh per system plus direct electric motor control and energy recovery under sail. All power flows managed within a single unit.

SYSTEM

Integration

Redundancy



1. OneBox Energy | Propulsion
2. PowerPod
3. Battery pack
4. EPMS
5. PowerUp Charger
6. Generator

Unique architecture

The same standardized, industrialized system integrates into every vessel : monohull or multihull, sailboat or motor yacht, new build or refit. One architecture, replicated identically across the entire shipyard fleet.

Modular

Each component is interconnected and operates as a single integrated system. The propulsion configuration covers sailing vessels from 40 to 65ft, the energy configuration scales to any vessel type up to 120ft, both adapt without redesign.

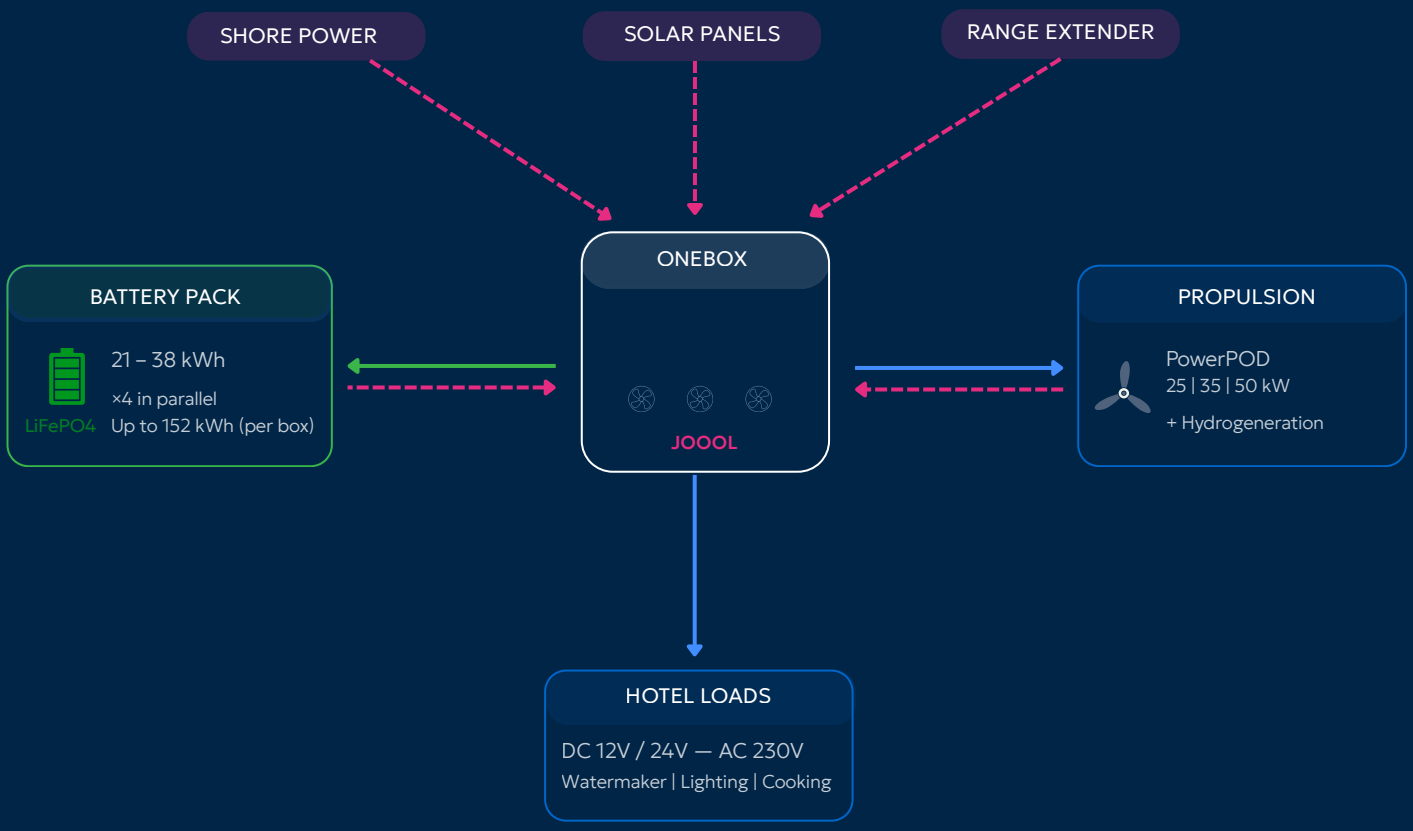
Plug & Play

Factory-wired and pre-configured. Ready to drop into a shipyard production line, standardized connectors, no specialist electrical engineering required on the vessel.

SYSTEM INTEGRATION — HOW IT WORKS

Centralized energy architecture

ENERGY PRODUCTION DISTRIBUTION STORAGE



The JOOOL hybrid system relies on a centralized and intelligent architecture

All energy sources converge into the OneBox. It automatically manages incoming flows, prioritizes renewable sources, and optimizes battery charging with precision. Depending on the OneBox system, it powers both electric propulsion and onboard needs.

Automatic source prioritization

Solar and hydrogeneration are used first. Shore power and generator activate only when renewable input is insufficient.

12V or 24V output

Configured at installation to match the vessel's electrical architecture. DC power distributed to all service loads from a single unit.

Scalable storage

Battery capacity scales from 21 kWh to over 152 kWh with up to four LiFePO4 packs in parallel.

Chager PowerUP

Complete electric propulsion and energy management systems for sailboats and motor yachts. Designed, manufactured and supported from La Rochelle since 1997.

EPMS- Software manager

IP42 CE

HEART OF THE SYSTEM

The EPMS is the intelligence behind the entire JOOOL system. It coordinates all components : OneBox, Electric Pod, battery packs, charger, ensures they work together, and manages all energy sources in real time, prioritizing renewables and limiting generator use to when strictly necessary.

System coordinator

Connects and coordinates all JOOOL components : OneBox, PowerPod, batteries, charger. Every modules communicates through the EPMS.

Real-time energy management

Monitors and optimizes all onboard energy flows continuously. Shore power, solar, generator, battery, managed without manual intervention.

Renewable priority

Automatically prioritizes solar and hydrogeneration input. Generator activates only when battery reserves require it, and stops as soon as possible.

Shipyard ready

Proprietary architecture developed and manufactured in France. Designed for production line integration : same configuration, every vessel.

EPMS - SOFTWARE MANAGER

KEY FEATURES

- Industrial connectors

OneBox-Energy

IP40 | HVIL | CE

AUTOMATED ENERGY MANAGEMENT

The OneBox Energy centralizes all energy flows : shore power, solar, generator, and battery storage into a single unit. It automatically manages distribution, minimizes generator runtime, and delivers stable DC power to all onboard systems. Three output connectors allow additional options such as inverter 230VAC or direct DC bus. Several units can be connected in parallel to scale capacity with the vessel.

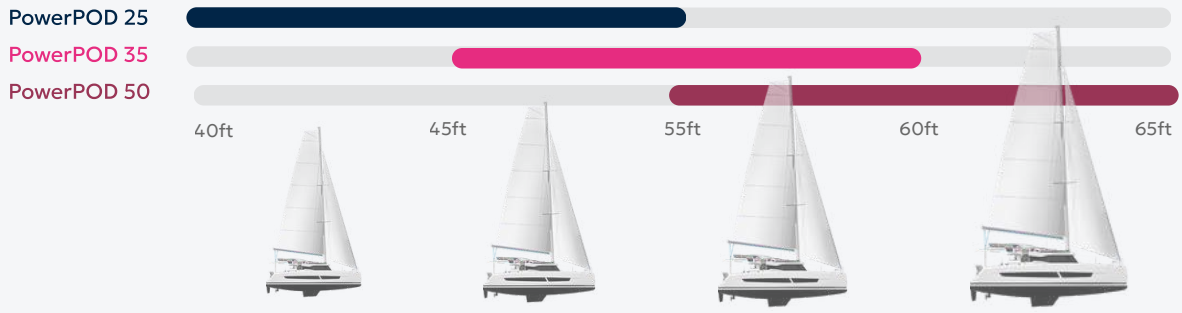
MONOHULL & MULTIHULL



Hybrid marine throttle

IP66 | HVIL | CE

SMOOTH OPERATION

Provides intuitive and secure control of electric or hybrid propulsion, from start-up to regeneration, all with one hand. Available as single lever (monohull) or dual lever (catamaran).

CAN Bus / Analog / PWM | 12–24V DC | Dual helm stations

SINGLE LEVER
Monohull

DUAL LEVER
Catamaran

KEY FEATURES

One-handed operation
Ergonomic design for precise & intuitive control

Neutral point detection
Click-feedback confirms neutral and ensures safe stop

Auto-calibrating sensor
Self-adjusting potentiometer — no upkeep required

Prop / Regen buttons
Dedicated buttons for propulsion and regenerative braking

Quick connection setup
Fast installation with plug-and-play interfaces

IP66 waterproof
Rated for harsh marine environments

SPECS	VALUE
Power supply	12–24V DC
Output	CAN Bus / Analog / PWM
Materials	Aluminium, A2 Stainless Steel, POM

Interfaces- Onboard display

CE

ONE SCREEN FOR THE WHOLE SYSTEM

The JOOOL display centralizes all hybrid system data into a clear, intuitive interface. Whether you're cruising, regenerating, or charging at anchor, it adapts in real time to match your onboard needs, you stay in control effortlessly.

7" sunlight-readable	Marine-grade IP67	Dual-station ready	CAN bus integration

PROPULSION INTERFACE
[catamaran display]

ENERGY MANAGEMENT INTERFACE
[catamaran display]

KEY FEATURES

Power flow monitoring
Full picture of onboard energy at a glance. Track how solar panels, shore power, and batteries supply all onboard systems in real time.

Propulsion performance
Live motor insights for single or dual engine. Monitor RPM and power output per engine to optimize efficiency, range, and responsiveness.

Marine-grade touchscreen
Rugged, waterproof and sunlight-readable.
Designed for permanent deck exposure in all sea conditions.

Autonomy & regeneration
Monitor energy recovery in real time while sailing. See autonomy forecasts and live battery charge status at a glance.

Charger

IP67 | HVIL | CE

COMPACT & GLOBALLY COMPATIBLE

An advanced high-efficiency charger built for marine and industrial use. With robust design, wide input compatibility, and compact size, PowerUp delivers reliable performance in every port in the world.

CAN BUS

AC 90–265V

CHARGER

3.3 kW or 6.6 kW output
Delivers strong and reliable output, ideal for hybrid marine propulsion systems. Two power levels to match vessel requirements.

Global compatibility
Wide input range — AC 90–265V / 47–63Hz — for worldwide port use. No adapter or configuration change required.
